The application has been amended as follows:

IN THE CLAIMS

Claim 11 (Currently Amended): A method of automating a switch matrix apparatus for cross-connecting a line or lines in a set of input lines to any line or lines in a set of output lines, said switch matrix comprising a plurality of electrically conducting contact pads disposed thereon, a plurality of contact means driven by a plurality of corresponding contact means positioning screws such that the contact means are slidably engageable with the contact pads for cross-connecting the lines, and position detection means for detecting the position of the contact means on the switch matrix, the method comprising the steps of:

displacing the contact means to engage a predetermined set of contact pads by rotating the contact means positioning screw;

detecting the position of the contact means; and

adjusting, if necessary, the position of the contact means based on the detected position, wherein

the contact means is accurately positioned on the switch matrix by control means in communication with the position detection means and an electric motor or motors driving the positioning screws, and

the contact means further includes corresponding sets of detector springs that are slidably engageable with a first and a set of detector pads for detecting the precise position of the contact means.

Allowable Subject Matter

2. **Claims 1, 3-7, 9-15 and 17** are allowed.
3. **Claims 2, 8 and 16** are cancelled.
4.
